We are looking for...

**PRACTICING FAMILY
PHYSICIANS IN
BRITISH COLUMBIA
WITH AN
INDEPENDENT,
UNRESTRICTED
LICENSE**

Risks/Benefits

Risks: There are no risks associated to study participation.

Benefits: You may not directly benefit, but your participation may contribute to informing BC's frailty guidelines.

Participants will be invited to enter into an optional draw to win one of two \$150 gift certificates!

Why is this study being done?

Did you know that patients over 65 account for almost 20% of BC's population?

Did you also know that majority of elder care in Canada is provided by family physicians?

Frailty in the older adult population needs to be better understood.

We are conducting a survey to better understand family physicians' perceptions and knowledge of frailty in their clinical practice.

WHO IS CONDUCTING THE STUDY?

The BC Injury Research and Prevention Unit,
UBC Faculty of Medicine
