

# Did you know...?

By regularly updating your capacity in the Provincial Attachment System (PAS), you help our community gain access to more providers committed to longitudinal primary care!

Data is the foundational building block to plan for a highly functioning system. As each physician and clinic participates in PAS, we will better understand attachment goals.

## Updating your monthly capacity regularly and accurately can help:

- Ensure Attachment Coordinators understand your attachment needs accurately and in real time
- Identify gaps and measure our progress
- Empower communities to plan more effectively to meet future needs

## There are 2 fields you should be regularly updating in PAS:

- ✓ **Desired Panel Size** - The maximum number of patients desired on a panel
- ✓ **Monthly Capacity Rate** - How many new patients could be accepted each month

If you'd like more information around how to update your panel in PAS, please reach out to our attachment team or visit the link below!
